**CODES UTILISES EN MATIERE DE DOCUMENTATION DES
BREVETS D'INVENTION ET DES MODELES D'UTILITE**

- (11) Numéro de publication.
- (12) Désignation du type de document.
- (19) Identification de l'office qui publie le document.
- (21) Numéro d'enregistrement ou de dépôt.
- (22) Date de dépôt.
- (24) Date de délivrance.
- (30) Pays dans lequel (lesquels) la(les) demande(s) de priorité a (ont) été déposée(s).
Date(s) de dépôt de la (des) demande(s) de priorité.

(le cas échéant)

- Numéro(s) attribué(s) à la (aux) demande(s) de priorité.
- (51) Classification internationale des brevets(CIB).
- (54) Titre de l'invention.
- (57) Abrégé.
- (60) Références à d'autres documents apparentés (le cas échéant).
- (71) Nom(s) du ou des demandeur(s).
- (72) Nom de l'inventeur (le cas échéant) suivi éventuellement du nom de la société d'appartenance.
- (73) Nom(s) du ou des titulaire(s) le cas échéant.
(Ce code n'apparaît que sur la première page du brevet délivré)
- (74) Nom du mandataire en territoire OAPI (le cas échéant).

**CODES UTILISES EN MATIERE D'INSCRIPTIONS
DANS LE REGISTRE SPECIAL DES BREVETS D'INVENTION ET DES
MODELES D'UTILITE**

- (1) Numéro d'enregistrement.
- (2) Numéro et date de dépôt.
- (3) Nature de l'inscription: le changement d'adresse ou de dénomination, la cession, la concession de licence, la renonciation, la fusion, le retrait, la radiation, le transfert, l'apport, l'annulation de la licence,l'extension des droits à un nouvel Etat membre...
- (4) Bénéficiaire de l'inscription ou pays bénéficiaire de l'extension.
- (5) Numéro de l'inscription.
- (6) Date de l'inscription.

**CLARIFICATION DU REGLEMENT RELATIF A L'EXTENSION DES DROITS
SUITE A UNE NOUVELLE ADHESION A L'ACCORD DE BANGUI**

RESOLUTIONN°47/32

**LE CONSEIL D'ADMINISTRATION
DE L'ORGANISATION AFRICAINE DE LAPROPRIETE INTELLECTUELLE**

Vu L'accord portant révision de l'accord de Bangui du 02 Mars 1977 instituant une Organisation Africaine de la Propriété Intellectuelle et ses annexes ;

Vu Les dispositions des articles 18 et 19 dudit Accord relatives Aux attributions et pouvoirs du Conseil d'Administration ;

ADOpte la clarification du règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui ci-après :

Article 1er :

Le Règlement du 04 décembre 1988 relatif à l'extension des droits suite à une nouvelle adhésion à l'Accord de Bangui est réaménagé ainsi qu'il suit :

«Article 5 (nouveau) :

Les titulaires des titres en vigueur à l'Organisation avant la production des effets de l'adhésion d'un Etat à l'accord de Bangui ou ceux dont la demande a été déposée avant cette date et qui

voudront étendre la protection dans ces Etats doivent formuler une demande d'extension à cet effet auprès de l'Organisation suivant les modalités fixées aux articles 6 à 18 ci-dessous.

Le renouvellement de la protection des titres qui n'ont pas fait l'objet d'extension avant l'échéance dudit renouvellement entraîne une extension automatique des effets de la protection à l'ensemble du territoire OAPI».

Le reste sans changement.

Article 2 :

La présente clarification, qui entre en vigueur à compter du 1 er janvier 2008, s'applique aussi aux demandes d'extension en instance et sera publiée au Bulletin Officiel de l'Organisation.

Fait à Bangui le 17 décembre 2007

(73) LES LABORATOIRES SERVIER, 35 Rue de Verdun, 92284 SURESNES CEDEX (FR)

(74) Cabinet EKANI-CONSEILS, B.P. 5852, YAOUNDE (CM).

(57) The present invention relates to a complex of agomelatine and to preparation thereof. The hydrogen halide complex of agomelatine obtained through the present method is more soluble, more stable, and of higher purity than agomelatine itself, making it more suitable to be used in pharmaceutical preparation. Using this method, product of high purity can be obtained through a simple process, without having to incur further complicated steps.

(57) A device for transporting bulk materials comprises a conveying chute (1) having at least one tubular conveying chute portion (2), in which fluidizing gas can be introduced into the lower region of the tube cross-section via at least one main channel (3) or main channel portion (11) extending in longitudinal direction of the conveying chute (1) and via gas outlet channels (4) branching off from the same at intervals. The at least one main channel (3) or main channel portion (11) extends outside the conveying chute (1) or the respective conveying chute portion (2). At least at their gas outlet end, the gas outlet channels (4) are formed as nozzle tubes (6) branching off from the main channel (3) or the respective main channel portion (11) and directed

downwards at an angle from the side through the tube wall (5) of the conveying chute (1) or the respective conveying chute portion (2).

(54) A positioning guide and a femur bone cutting guide system.

(72) John Robert HONIBALL.

(73) CUSTOM MED ORTHOPAEDICS (PROPRIETARY) LIMITED, 43 Cole Street, Schonenberg Estate, SOMERSET WEST, 7129 Western Cape (ZA)

(74) SCP AKKUM, AKKUM & Associates, Quartier Mballa II, Dragages, B.P. 4966, YAOUNDE (CM).

(57) A femur bone cutting guide system (100) for use in a knee replacement surgical procedure includes a positioning guide in the form of a moulding (132), a bone cutting guide assembly 18 comprising bone cutting guide components (140, 142); and a guide mounting arrangement comprising a pair of mounting plates (144.1 and 144.2). The moulding (132) is constructed from anatomical data of the femur permitting it to be securely fitted to the lower extremity of the femur. Two attachment posts (154.1 and 154.2) which are connected to the moulding (132) provide for removable mounting of the components (140, 142) to the moulding. The components (140, 142) define guide formations for guiding a cutter for cutting prosthetic joint locating faces in the femur. The plates (144.1, 144.2) are removably mounted to the components (140, 142) and fixed to opposite sides of the femur. The components (140, 142) are then removed allowing removal of the moulding (132). Thereafter, the components are remounted to the plates (144.1, 144.2) to provide for cutting of the femur.

- (57) A bone cutting guide system (110) includes a bone cutting guide assembly (111) and a positioning guide (114). The bone cutting guide assembly (111) includes a base pin (112) and a guide mounting arrangement comprising a placement pin guide (113). The pin (112) has an elongate cylindrical shaft (115) having a penetrating end (117). The positioning guide (114) includes a moulding (116) and a hollow cylindrical guide post (118) fixed to the moulding (116). The moulding (116) is constructed from anatomical data obtained by means of a radiographic scan of the head (55) of the femur (14) prior to surgery. The placement pin guide (113) has a handle (121) and a hollow cylindrical guide sleeve (119) dimensioned to slidingly receive the guide pin (112) therein. In use, the moulding (116) is fitted to the head (55) of the femur. The guiding formation (119) of the pin placement guide (113) is received in the post (118) for guiding the insertion of the pin (112) into the head (55) of the femur (14).

(74) Cabinet CAZENAVE SARL, B.P. 500, YAOUNDE (CM).

(57) Methods of reel-laying a mechanically lined pipe (MLP) are described. These include the steps of : spooling the MLP (12) onto a reel (10) in the complete or substantial absence of internal pressure above ambient pressure in the MLP; spooling off the MLP from the reel; aligning and straightening the spooled off MLP, in the complete or substantial absence of internal pressure above ambient pressure, to provide an MLP for laying; and/or the steps of : spooling the MLP (12) onto a reel (10) resulting in the formation of wrinkles in the spooled MLP; spooling off the MLP from the reel; aligning and straightening the unspooled MLP to provide an MLP for laying having wrinkles

<4 mm high, removing wrinkles, if any, whilst performing the hydrotest which is used to check fluid tightness of the line. By minimising the size of the wrinkles and/or particularly selecting the liner of the MLP, the methods of the present invention allow safer, faster spooling and spooling off to be effected to provide safer, faster and more economical laying of an MLP.

(57) L'invention concerne une ruche à élongation horizontale se rapportant à l'apiculture.

Cette ruche est le résultat de juxtaposition progressive de blocs constitutifs que sont le corps et les compartiments (1) latéraux. Le rajout des latéraux se fait de part et d'autre du corps. Chaque composante possède son couvre-cadres (7) et son couvercle (8), ce qui permet son ouverture indépendamment des autres composantes. Le raccordement de deux parties successives se fait par les couvercles (8) contenant des entailles (10) dans lesquelles s'insère une baquette (9) de jonction. De face, les mêmes composantes sont maintenues solidement par des barettes (2) de jonction.

(57) Zonal isolation apparatus includes at least one packer assembly and can be used in completing an open-hole portion of a wellbore, which open-hole portion extends through at least two subsurface intervals. The zonal isolation apparatus includes base pipe and filter medium, which together form a sand screen. Each packer assembly comprises at least two mechanically set packer elements. Intermediate the at least two

mechanically set packer elements is at least one swellable packer element. The swellable packer element is actuated over time in the presence of a fluid such as water, oil, or a chemical. Swelling may occur should one of the mechanically set packer elements fail. The zonal isolation apparatus also includes alternate flow channel(s) that serve to divert gravel pack slurry from an upper interval to lower intervals during gravel packing operations. A method for completing a wellbore using the zonal isolation apparatus is also provided herein.

(57) A wind turbine for capturing energy from a fluid flow comprises a rotor having a rotational axis and a plurality of rotor blades (104) arranged for rotation about the rotational axis. The rotor blades extend longitudinally in a direction substantially parallel to the rotational axis. A shield member V3 is arranged to shield some of the rotor blades from an oncoming wind where incidence of the wind on those rotor blades would

act against rotation of the rotor in the direction of rotation. The rotor blades (104) are distributed about the circumference of the rotor and are spaced from the rotational axis, defining a substantially cylindrical space within the rotor through which the wind passes. The shield member V3 is defined by a radially inward surface and a radially outward surface. The radially inward surface follows substantially a portion of the circumference of the rotor. The radially outward surface of the shield member V3 comprises a first portion which meets the radially inward surface. In the region of the interface with the radially inward surface, the first portion extends in a first direction n that makes an angle of at least 0 degrees and up to 90 degrees in the contra-rotational direction with the radial direction of the rotor. The radially outward surface of the shield member V3 comprises a second portion which meets the first portion. At least a portion of the second portion extends in a second direction p that makes an angle of more than 0 degrees in the contra-rotational direction with the first direction n. The turbine has improved power output and efficiency compared to earlier similar designs.

Ces différentes parties sont placées dans un bac transparent en verre.

Une image imprimée sur la toile en arrière-plan permet de présenter une vue perspective et continue. Le bac porte un couvercle amovible ayant une ouverture utilisée pour l'entretien intérieur et l'alimentation des poissons. Il supporte un système de ventilation et de refoulement permettant l'aération de la partie émergée.

Un système électrique permet d'obtenir, pour un même relief, des variantes de couleurs matérialisant l'hiver, l'été, l'automne et le printemps. Les différentes composantes du paysage sont interchangeables et permettent de modifier le décor pour l'adapter aux saisons.

L'ensemble du dispositif repose sur un support meuble mobile contenant une armoire pour la conservation d'objets utiles.

(54) Fresh fruit bunches harvesting knife (Palm pole).

(72) NJOH NGANDA Justin.

(73) NJOH NGANDA Justin, B.P. 438, BUEA (CM).

(57) A portable harvester for cutting limbs comprising of an injection molded ABS handle with an OEM pole and a sickle shape cutting double edged, hand polished, cutlery grade, serrated, stainless steel blade pivotally attached to the tip of the pole to harvest, prune, Cut limbs of palm and fruit trees with respect to the OEM pole wherein the pivoting means is responsive to movements of the sliding portions between the first and sixth positions of the pole. In one embodiment the overall harvester is adjustable consisting of twist and lock pole into a number of effective operating harvesting lengths.

(57) A system and method for providing an electronic funds and receipt transfer system capable of making available to the customer or other authorised third party, receipt data relating to an EFTPOS transaction in an electronic format
(26). In accordance with one preferred

embodiment, the receipt data generated by the merchant at the time of sale is attached to the EFTPOS transaction data and sent using the same channels as known EFTPOS systems (16). Alternatively the receipt data may be transferred to a third party location for later retrieval. To access the receipt data the system allows the customer to access their financial institutions internet banking webpage (22) and print, save or email a copy of the receipt (26) as generated by the merchant at the time of sale.

(57) A stop collar or like device is formed in one piece to have a portion for a tool to be attached. Movement of the tool allows the collar to be drawn tightly into engagement onto a pipe or other tubular member. A bow centraliser has alternate bows longitudinally offset to reduce initial insertion force. The centraliser may be formed to have end bands of the type used in the stop collar.

(57) A base station (10) for wireless communication with equipment on a mine operation (40). The base station (10) is moveable and comprises a wireless network interface (16) arranged to facilitate communications with a monitoring station (14) and with at least one item of mine equipment (12) so that at least one item of mine equipment is monitorable and/or controllable from the monitoring station (14) through the base station (10). The base station also includes a camera (20) arranged to capture images of an area of the mine operation (40) adjacent the base station. The base station (10) is arranged to communicate information indicative of the captured images to the monitoring station (14) through the wireless network interface (16).

(57) A catalytic reaction module (10) for performing an endothermic reaction such as steam methane reforming, includes separate reactor blocks (12), each reactor block defining a multiplicity of first and second flow channels (15, 16) arranged alternately within the block to ensure thermal contact between the first and second flow channels. The reactor blocks (12a, 2b) may be arranged and connected for series flow of a combustible gas mixture in the first flow channels (15) and also of a gas mixture to undergo the endothermic reaction in the second flow channels (16). Catalyst elements are provided within the flow channels, and the catalyst varies between the blocks and/or within a block, in chemical composition, in catalyst loading or in active catalytic material loading.

(54) Le minimiseur de consommation électrique.

(72) GNAGBO Théodore.

(73) GNAGBO Théodore, B.P. 1065, ANYAMA (CI).

(57) L'invention concerne un dispositif pour produire de l'énergie électrique à partir d'une quantité minimale d'énergie électrique consommée.

Il comporte un moteur électrique (1) lié à un alternateur (4) par un réducteur (6) pour réduire la charge du moteur (1), ce qui va entraîner la réduction équivalente de la puissance absorbée par le moteur (1) : le rendement de ce dispositif est donc supérieur à 1.

L'alimentation du dispositif peut se faire par une batterie (8) rechargée automatiquement par de l'énergie produite par le système. Il se comporte dans ce cas comme un dispositif autonome de production d'électricité.

Il permet également d'accroître la production de l'électricité des centrales électriques existantes et évite par conséquent, leur multiplication.
